

International Strategic Equities Portfolio

Ticker: SCB Class-STESX; Advisor Class-STEYX

Before you invest, you may want to review the Portfolio's Prospectus, which contains more information about the Portfolio and its risks. The Portfolio's Prospectus and Statement of Additional Information, both dated January 31, 2025 and as may be amended or further supplemented, are incorporated by reference into this Summary Prospectus. For free paper or electronic copies of the Portfolio's Prospectus and other information about the Portfolio, go to http://www.alliancebernstein.com/links/pcmf, email a request to prorequest@alliancebernstein.com, or call (collect) (212) 486–5800.

PRO-0119-ISE-0125

INVESTMENT OBJECTIVE:

The Portfolio's investment objective is to provide long-term growth of capital.

FEES AND EXPENSES OF THE PORTFOLIO:

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Portfolio. You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees (fees paid directly from your investment)

	SCB Class	Advisor Class
Maximum Sales Charge (Load) Imposed on Purchases		
(as a percentage of offering price)	None	None
Maximum Deferred Sales Charge (Load)		
(as a percentage of offering price or redemption proceeds, whichever is lower)	None	None
Maximum Account Fee	None	None

Annual Portfolio Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

	SCB Class	Advisor Class
Management Fees	0.66%	0.66%
Distribution and/or Service (12b-1) Fees	None	None
Other Expenses:		
Shareholder Servicing	0.25%	0.00%
Transfer Agent	0.01%	0.01%
Other Expenses	0.03%	0.03%
Total Other Expenses	0.29%	0.04%
Total Annual Portfolio Operating Expenses	0.95%	0.70%

Examples

The Examples are intended to help you compare the cost of investing in the Portfolio with the cost of investing in other mutual funds. The Examples assume that you invest \$10,000 in the Portfolio for the time periods indicated and then redeem all of your shares at the end of those periods. The Examples also assume that your investment has a 5% return each year and that the Portfolio's operating expenses stay the same.

Although your actual costs may be higher or lower, based on these assumptions your costs as reflected in the Examples would be:

	SCB Class	Advisor Class
After 1 Year	\$ 97	\$ 72
After 3 Years	\$ 303	\$224
After 5 Years	\$ 525	\$390
After 10 Years	\$1,166	\$871

Portfolio Turnover

The Portfolio pays transaction costs, such as commissions, when it buys or sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Portfolio shares are held in a taxable account.

These transaction costs, which are not reflected in the Annual Portfolio Operating Expenses or in the Examples, affect the Portfolio's performance. For the most recent fiscal year, the Portfolio's portfolio turnover rate was 69% of the average value of its portfolio.

PRINCIPAL STRATEGIES:

The Portfolio invests, under normal circumstances, at least 80% of its net assets (plus any borrowings for investment purposes) in equity securities or other securities or instruments with similar economic characteristics, including derivatives related to equity securities. Equity securities are primarily common stocks, although, for purposes of the 80% policy, equity securities may also include preferred stocks, warrants, convertible securities, sponsored or unsponsored American Depositary Receipts ("ADRs") and Global Depositary Receipts ("GDRs") and equity real estate investment trusts ("REITs"). You will be notified at least 60 days prior to any change to the Portfolio's 80% investment policy.

AllianceBernstein L.P. serves as the Portfolio's investment manager ("Manager"). The Manager invests the assets of the Portfolio primarily (under normal circumstances, at least 65% of net assets) in equity securities of issuers in countries that make up the Morgan Stanley Capital International ("MSCI") All Country World Index ("ACWI") ex USA Index, which includes both developed and emerging market countries. The Portfolio focuses on securities of large-cap and mid-cap companies. The Manager expects to allocate fund assets among issuers in many foreign countries, but not necessarily in the same proportion that the countries are represented in the MSCI ACWI ex USA Index and may invest in issuers in countries outside of the MSCI ACWI ex USA Index. The Portfolio's exposure among non-U.S. countries may change over time based on the Manager's assessment of market conditions and the investment merit of particular non-U.S. issuers. Under normal circumstances, the Manager invests in companies located in at least three countries other than the United States and expects to have exposure to issuers in several different countries. In determining a company's location for purposes of the Portfolio's investment policies and restrictions, the Manager may consider: (1) the place of domicile; (2) where the company has an established presence and conducts its business; and (3) where the company conducts a significant part of its economic activities. The Portfolio may, at times, invest significantly in emerging markets.

The Manager utilizes both fundamental and quantitative research to both determine which securities will be held by the Portfolio and to manage risk. In applying its quantitative analysis, the Manager considers a number of metrics that have historically provided some indication of favorable future returns, including metrics relating to valuation, quality, investor behavior and corporate behavior. Utilizing these resources, the Manager expects to allocate the Portfolio's assets among issuers, industries and geographic locations to attempt to create a diversified portfolio of investments.

The Portfolio may also invest in exchange-traded funds ("ETFs") and other investment companies from time to time.

The Portfolio expects to utilize derivatives, such as options, futures contracts, forwards and swaps. For example, the Portfolio may invest in currency derivatives as discussed below and in futures contracts to gain exposure to certain markets. Derivatives may provide a more efficient and economical exposure to market segments than direct investments, and may also be a more efficient way to alter the Portfolio's exposure.

Fluctuations in currency exchange rates can have a dramatic impact on the returns of foreign equity securities. The Manager may employ currency hedging strategies, including the use of currency-related derivatives, to seek to reduce currency risk in the Portfolio, but it is not required to do so. The Manager may also take long and short positions in currencies or related derivatives for investment purposes, independent of any security positions. The Manager may use stock index futures contracts to gain access to certain markets.

PRINCIPAL RISKS:

The share price of the Portfolio will fluctuate and you may lose money. There is no guarantee that the Portfolio will achieve its investment objective.

• Foreign (Non-U.S.) Securities Risk: Investments in foreign securities entail significant risks in addition to those customarily associated with investing in U.S. securities, such as less liquid, less transparent, less regulated and more volatile markets. These risks include risks related to unfavorable or unsuccessful government actions, reduction of government or central bank support, economic sanctions and tariffs and potential responses to those sanctions and tariffs, inadequate accounting standards and auditing and financial recordkeeping requirements, lack of information, social instability, armed conflict, and other adverse market, economic, political and regulatory factors, all of which could disrupt the financial markets in which the Portfolio invests and adversely affect the value of the Portfolio's assets.

• Market Risk: The Portfolio is subject to market risk, which is the risk that stock prices in general or in particular countries or sectors may decline over short or extended periods. Stock prices may decline in response to adverse changes in the economy or the economic outlook; deterioration in investor sentiment; interest rate, currency and commodity price fluctuations; inflationary pressures; adverse geopolitical, social or environmental developments; issuer- and sector-specific considerations; public health crises (including the occurrence of a contagious disease or illness) and regional and global conflicts; cybersecurity events; market disruptions caused by tariffs; trade disputes; levels of government debt and deficits and measures to address budget deficits; downgrading of sovereign debt; sanctions or other government actions; and other factors.

The United States and other countries are periodically involved in disputes over trade and other matters, which may result in tariffs on various categories of goods imported from the other country, restrictions on investment and adverse impacts on affected companies and securities. For example, the current political climate between the United States and China has intensified concerns about protectionist trade policies and a potential trade war between China and the United States. The United States has imposed tariffs and other trade barriers on Chinese exports and placed other restrictions on or barriers to investments in China. Trade disputes, particularly prolonged disputes, may adversely affect the economies of the United States and its trading partners, as well as the companies directly or indirectly affected by the dispute and financial markets generally, and thus may adversely affect the value of the Portfolio's assets. In addition, an increase in tariffs or trade restrictions, or even the threat of such increased tariffs or restrictions, could lead to a significant reduction in international trade, which could have a negative impact on the global economy and a commensurately negative impact on the Portfolio. The United States government has in the recent past acted to prohibit U.S. persons, such as the Portfolio, from owning, and required them to divest, certain Chinese companies designated as related to the Chinese military. There is no assurance that more such companies will not be so designated in the future, which could limit the Portfolio's opportunities for investment and require the sale of securities at a loss or make them illiquid. Some countries and regions in which the Portfolio invests have strained international relations due to territorial disputes, historical animosities or other defense concerns. Incidents involving a country's or region's security may cause uncertainty in the markets and may adversely affect a Portfolio's investments. For example, the Chinese government is involved in a territorial dispute with Taiwan as well as other territorial disputes; the risk of a forced unification with Taiwan by the Chinese government may adversely affect securities of Chinese, Taiwan-based and other issuers both in and outside the region. If the political climate between the United States, China and other countries in Asia continues to deteriorate, economies and markets may be adversely affected.

Policy and legislative changes in the U.S. and in other countries are affecting many aspects of financial regulation, and these and other events affecting global markets, such as the United Kingdom's exit from the European Union; potential trade imbalances with China or other countries; or sanctions or other government actions against Russia, other nations, or individuals or companies (or countermeasures taken in response to such sanctions), may contribute to decreased liquidity and increased volatility in the financial markets. The impact of these changes on the markets, and the implications for market participants, may not be fully known for some time.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, armed conflict, including Russia's military invasion of Ukraine and the conflict involving Israel and other countries in the Middle East, terrorism, natural disasters (including the spread of infectious illness) and other circumstances in one country or region could have profound impacts on global economies or markets. Following Russia's invasion of Ukraine commencing in February of 2022, the United States, the European Union and other countries instituted numerous sanctions against Russia and Belarus and certain companies and individuals. Russia in turn has taken a large number of retaliatory actions, some of which effectively froze Russian securities held by U.S. investors (including U.S. funds such as the Portfolio) and investors in other countries viewed as "unfriendly" by Russia, including securities represented by depositary receipts, effectively precluding the Portfolio from buying, selling, receiving or delivering those securities or accessing income received on such securities. Since then, Russian securities held by investors in the U.S. and other jurisdictions viewed as "unfriendly" by Russia have lost all, or nearly all, of their market value, and many other issuers, securities and markets have been adversely affected. The disruption of the Russian economy has had severe adverse effects on the region and beyond, including significant negative impacts on the markets for certain securities and commodities, such as oil and natural gas, as well as other sectors. As a result, whether or not the Portfolio invests in securities of issuers located in or with significant exposure to countries experiencing economic and financial difficulties, the value and liquidity of the Portfolio's investments may be negatively affected.

- Foreign Currency Risk: This is the risk that changes in foreign (non-U.S.) currency exchange rates may negatively affect the value of the Portfolio's investments or reduce the returns of the Portfolio. For example, the value of the Portfolio's investments in foreign securities and foreign currency positions may decrease if the U.S. Dollar is strong (i.e., gaining value relative to other currencies) and other currencies are weak (i.e., losing value relative to the U.S. Dollar).
- Country Concentration Risk: The Portfolio may not always be diversified among countries or regions and the effect on the share price of the Portfolio of specific risks such as political, regulatory and currency may be magnified due to concentration of the Portfolio's investments in a particular country or region.

- Emerging Markets Securities Risk: Investments in foreign securities entail significant risks in addition to those customarily associated with investing in U.S. equities. These risks include risks related to unfavorable or unsuccessful government actions, reduction of government or central bank support, economic sanctions and tariffs and potential responses to those sanctions and tariffs, inadequate accounting standards and auditing and financial recordkeeping requirements, lack of information, social instability, armed conflict, and other adverse market, economic, political and regulatory factors, all of which could disrupt the financial markets in which the Portfolio invests and adversely affect the value of the Portfolio's assets. These risks are heightened with respect to issuers in emerging–market countries because the markets are less developed, less liquid and subject to increased potential for market manipulation, and there may be a greater amount of economic, political and social uncertainty. These risks are even more pronounced in "frontier" markets, which are investable markets with lower total market capitalization and liquidity than the more developed emerging markets. Emerging markets typically have fewer medical and economic resources than more developed countries, and thus they may be less able to control or mitigate the effects of a pandemic, climate change, or a natural disaster.
- **Sector Risk:** The Portfolio may have more risk because of concentrated investments in a particular market sector, such as the financials and information technology or industrials sector. Market or economic factors affecting that sector could have a major effect on the value of the Portfolio's investments.
- Redemption Risk: The Portfolio may experience heavy redemptions that could cause the Portfolio to liquidate its assets at inopportune times or unfavorable prices or increase or accelerate taxable gains or transaction costs and may negatively affect the Portfolio's net asset value ("NAV"), or performance, which could cause the value of your investment to decline. Redemption risk is heightened during periods of overall market turmoil.
- Actions by a Few Major Investors: In certain countries, volatility may be heightened by actions of a few major investors. For example, substantial increases or decreases in cash flows of mutual funds investing in these markets could significantly affect local stock prices and, therefore, share prices of the Portfolio.
- Capitalization Risk: Investments in mid-capitalization companies may be more volatile than investments in large-capitalization companies. Investments in mid-capitalization companies may have additional risks because these companies may have limited product lines, markets or financial resources, and their personnel may lack management experience. The prices of securities of mid-capitalization companies generally are more volatile than those of large capitalization companies and are more likely to be adversely affected than large capitalization companies by changes in earnings results and investor expectations or poor economic or market conditions, including those experienced during a recession. Securities of mid-capitalization companies may underperform large capitalization companies, may be harder to sell at times or at prices the portfolio managers believe appropriate and may have greater potential for losses.
- Allocation Risk: The Portfolio may seek to focus on different investment disciplines or factors at different times as a means to achieve its investment objective. In the event that the investment disciplines or factors to which the Portfolio has greater exposure perform worse than the investment disciplines or factors with less exposure, the Portfolio's returns may be negatively affected.
- Derivatives Risk: The Portfolio may use derivatives in currency hedging as well as for direct investments to gain access to certain markets, earn income, enhance return and broaden portfolio diversification, which entail greater risk than if used solely for hedging purposes. While hedging can guard against potential risks, there is also a risk that a derivative intended as a hedge may not perform as expected. In addition to other risks such as the credit risk of the counterparty (the party on the other side of the transaction), derivatives involve the risk that changes in the value of the derivative may not correlate with relevant assets, rates or indices. Derivatives may be difficult to price or unwind, and small changes may produce disproportionate losses for the Portfolio. A short position in a derivative instrument involves the risk of an unlimited increase in the value of the underlying asset, reference rate or index, which could cause the Portfolio to suffer a potentially unlimited loss. Certain derivatives have the potential for unlimited loss, regardless of the size of the initial investment. Assets required to be set aside or posted as margin or collateral for derivatives positions may themselves go down in value, and these collateral and other requirements may limit investment flexibility. Some derivatives involve leverage, which can make the Portfolio more volatile and can compound other risks. Derivatives, especially over-the-counter derivatives, are also subject to counterparty risk, which is the risk that the counterparty on a derivative transaction will be unable or unwilling to honor its contractual obligations to the Portfolio. The U.S. Government and certain foreign governments have adopted regulations governing derivatives markets, including mandatory clearing of certain derivatives as well as additional regulations governing margin, reporting and registration requirements. The ultimate impact of the regulations remains unclear. Additional regulation may make derivatives more costly, limit their availability or utility, otherwise adversely affect their performance, or disrupt markets.
- Real Estate Related Securities Risk: Investing in real estate related securities includes, among others, the following risks: possible declines in the value of real estate; risks related to general and local economic conditions, including increases in the rate of inflation; possible lack of availability of mortgage funds; overbuilding; extended vacancies of properties; a weakening demand

for new office and retail space; increases in competition, property taxes and operating expenses; changes in zoning laws; costs resulting from the clean-up of, and liability to third parties for damages resulting from, environmental problems; casualty or condemnation losses; uninsured damages from floods, earthquakes or other natural disasters; limitations on and variations in rents; and changes in interest rates. In addition, global climate change may have an adverse effect on property and security values and may exacerbate the risks of natural disasters. The COVID-19 pandemic has also impacted certain real estate sectors by accelerating the trend towards online shopping and remote-working environments. Investing in Real Estate Investment Trusts ("REITs") involves certain unique risks in addition to those risks associated with investing in the real estate industry in general. Equity REITs may be affected by changes in the value of the underlying property owned by the REITs, while mortgage REITs may be affected by the quality of any credit extended. REITs are dependent upon management skills, are not diversified, and are subject to heavy cash flow dependency, default by borrowers and self-liquidation. Investing in REITs also involves risks similar to those associated with investing in small-capitalization companies. REITs may have limited financial and management resources, may trade less frequently and in a limited volume and may be subject to more abrupt or erratic price movements than larger company securities. REIT issuers may also fail to maintain their exemptions from investment company registration or fail to qualify for the "dividends paid deduction" under the Internal Revenue Code of 1986, as amended.

- Investment in Other Investment Companies Risk: As with other investments, investments in other investment companies, including other registered funds advised by the Manager and ETFs, are subject to market and management risk. The market value of the shares of other investment companies and ETFs may differ from their NAV. In addition, if the Portfolio acquires shares of investment companies, shareholders bear both their proportionate share of expenses in the Portfolio (including management and advisory fees) and, indirectly, the expenses of the investment companies.
- Illiquid Investments Risk: Illiquid investments risk exists when particular investments are difficult or impossible to purchase or sell, possibly preventing the Portfolio from purchasing or selling these securities at an advantageous price. In certain cases, governmental actions could prevent sales of securities or repatriation of proceeds. Illiquid securities may also be difficult to value. If the Portfolio is forced to sell an illiquid asset to meet redemption requests or other cash needs, or to try to limit losses, the Portfolio may be forced to sell at a substantial loss or may not be able to sell at all.
- Manager will apply its investment techniques and risk analyses in making investment decisions for the Portfolio, but these techniques, analyses and decisions may not work as intended or may not produce the desired results, and may, during certain periods, result in increased volatility for the Portfolio or cause the value of the Portfolio's shares to go down. In some cases, derivatives and other investment techniques may be unavailable, or the Manager may determine not to use them, possibly even under market conditions where their use could benefit the Portfolio. Some of these techniques may incorporate, or rely upon, quantitative models, but there is no guarantee that these models will generate accurate forecasts, reduce risk or otherwise perform as expected. In addition, the Manager may change the Portfolio's investment strategies or policies from time to time. Those changes may not lead to the results intended by the Manager and could have an adverse effect on the Manager and could also have an adverse effect on the value or performance of the Portfolio.

BAR CHART AND PERFORMANCE INFORMATION:

The bar chart and performance information provide an indication of the historical risk of an investment in the Portfolio by showing:

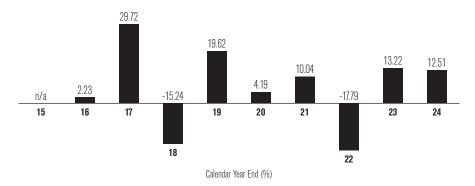

- how the Portfolio's performance changed from year to year over the life of the Portfolio; and
- how the Portfolio's average annual returns for one year, five years and over the life of the Portfolio compare to those of a broad-based securities market index.

You may obtain updated performance information for the Portfolio at www.bernstein.com (at the bottom of the page, click on "Investments," then "Mutual Fund Performance at a Glance").

The Portfolio's past performance before and after taxes, of course, does not necessarily indicate how it will perform in the future. As with all investments, you may lose money by investing in the Portfolio.

Bar Chart

The annual returns in the bar chart are for the Portfolio's SCB Class shares.

During the period shown in the bar chart, the Portfolio's:

Best Quarter was up 15.45%, 2nd quarter, 2020; and Worst Quarter was down -23.48%, 1st quarter, 2020.

Performance Table Average Annual Total Returns

(For the periods ended December 31, 2024)

		1 Year	5 Years	Since Inception*
SCB Class**	Return Before Taxes	12.51%	3.72%	5.52%
	Return After Taxes on Distributions	11.84%	3.08%	4.97%
	Return After Taxes on Distributions and Sale of Portfolio Shares	7.72%	2.93%	4.45%
Advisor Class	Return Before Taxes	12.77%	3.98%	5.77%
MSCI ACWI ex U (reflects no dedu	SA Index ction for fees, expenses, or taxes)	5.53%	4.10%	6.20%

^{*} Inception date for SCB and Advisor Class shares: December 21, 2015.

- Are shown for SCB Class shares only and will vary for Advisor Class shares because these Classes have different expense ratios;
- Are an estimate, which is based on the highest historical individual federal marginal income tax rates, and do not reflect the impact of state and local taxes; actual after-tax returns depend on an individual investor's tax situation and are likely to differ from those shown; and
- Are not relevant to investors who hold Portfolio shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts.

INVESTMENT MANAGER:

AllianceBernstein L.P. is the investment manager for the Portfolio.

PORTFOLIO MANAGER:

The following table lists the person primarily responsible for day-to-day management of the Portfolio:

Employee	Length of Service	Title
Vivian Chen	Since 2023	Senior Vice President of the Manager

PURCHASE AND SALE OF PORTFOLIO SHARES:

Purchase Minimums*

	Initial	Subsequent
SCB Class Shares	\$10,000	None
Advisor Class Shares (currently only available to certain clients of the Bernstein Private Wealth Management Unit of the Manager)	\$10,000	None

^{*} The Portfolio may waive investment minimums for certain types of retirement accounts or under certain other circumstances.

You may sell (redeem) your shares each day the New York Stock Exchange is open. You may sell your shares by sending a request to Sanford C. Bernstein & Co., LLC, 66 Hudson Boulevard East, 26th Floor, New York, NY 10001. Your purchase or sale price will be the next-determined NAV after the Portfolio receives your purchase or redemption request in proper form.

^{**} After-tax returns:

TAX INFORMATION:

The Portfolio intends to distribute dividends and/or distributions that may be taxed as ordinary income and/or capital gains.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES:

Shares of the Portfolio are offered primarily through the Manager's private client and institutional channels but may also be sold through intermediaries. If you purchase shares of the Portfolio through a broker-dealer or other financial intermediary (such as a bank), the Portfolio and its related companies may pay the intermediary for the sale of Portfolio shares and related services. These payments may create a conflict of interest by providing a financial incentive for the broker-dealer or other financial intermediary and your salesperson to recommend the Portfolio over another investment. Ask your salesperson or visit your financial intermediary's website for more information.
